

20260831 Pre-Peak rSFMS with SF, ND and NSF

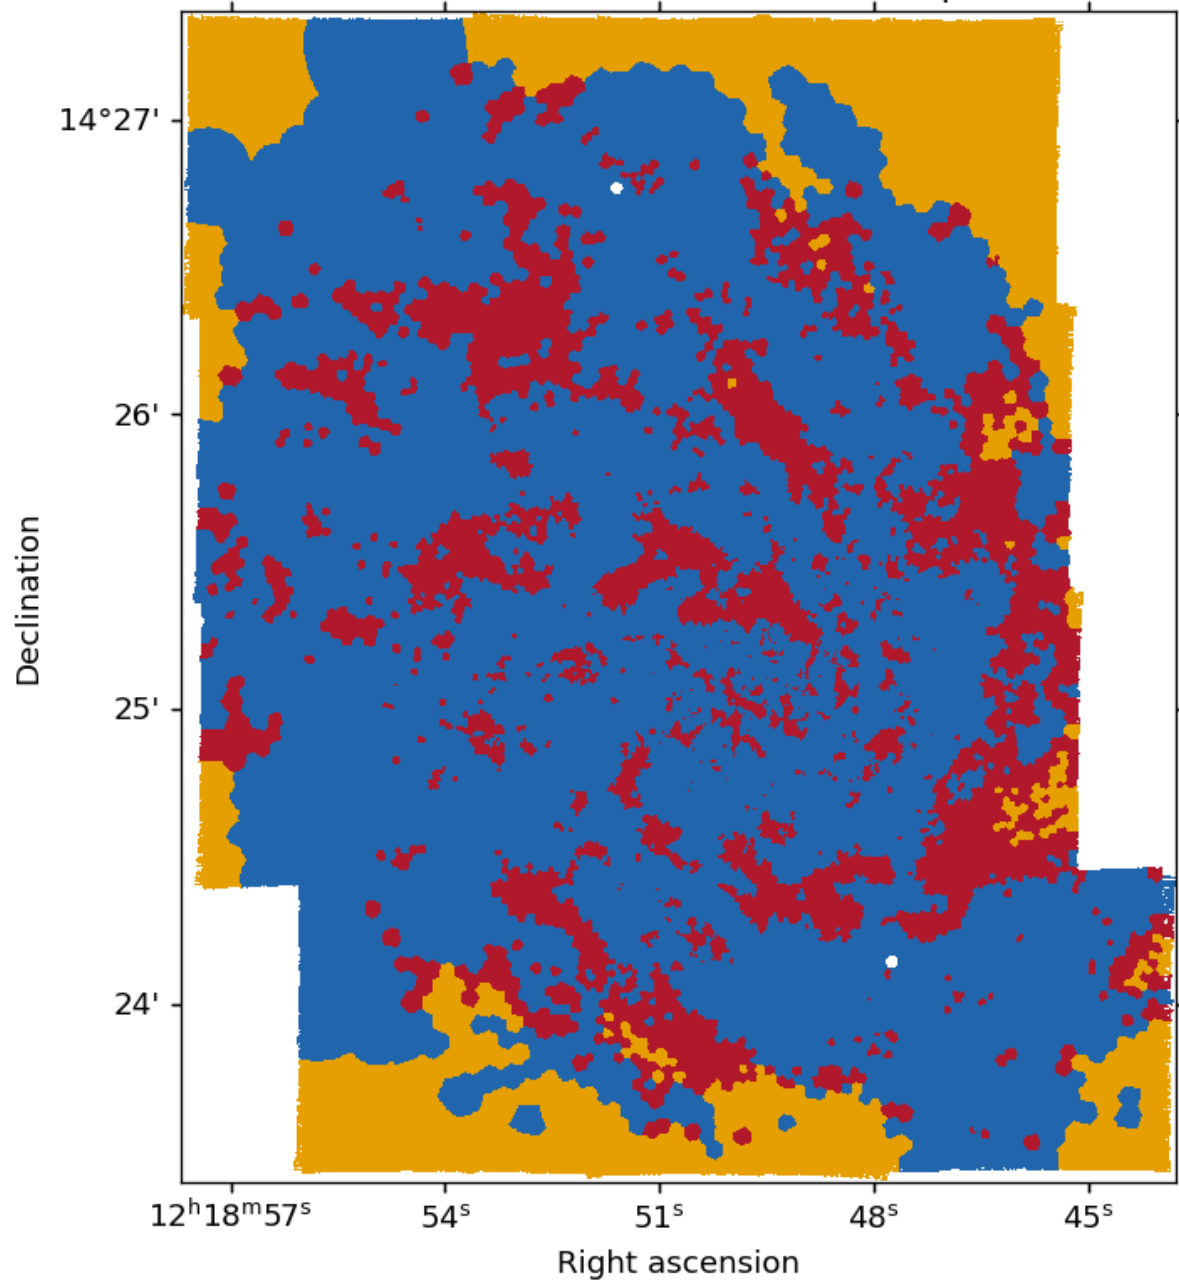

Here we locate the previously unplotted categories in the rSFMS as the upper limit of SFR. So NSF is more acting like the cut in slope while ND is more like cut in normalization.

COLOUR	SOURCE CATEGORY	MEANING OF THE PLOTTED ORDINATE
Blue	SF: original HII + EW > 6 Angstrom + intrinsic Halpha dispersion < 45 km/s	Original selected-SF value
Orange	ND: at least one Balmer line fails S/N or flux-floor detection	Stored pipeline proxy/substitution; not a formal upper limit
Red	NSF: both Balmer lines detected, but original SF selection fails	Halpha-equivalent SFR; not automatically a star-formation measurement

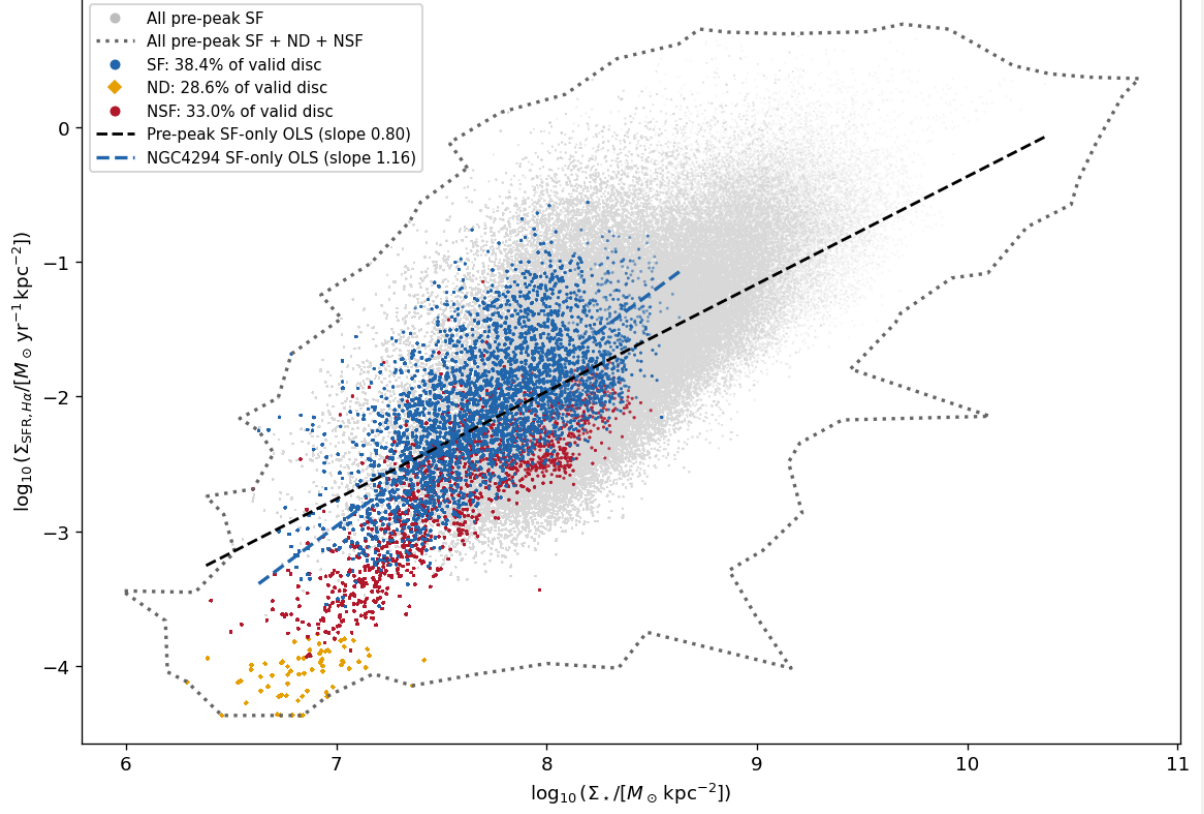

NGC4254 | pre-peak spatial categories
White: outside the valid-disc footprint

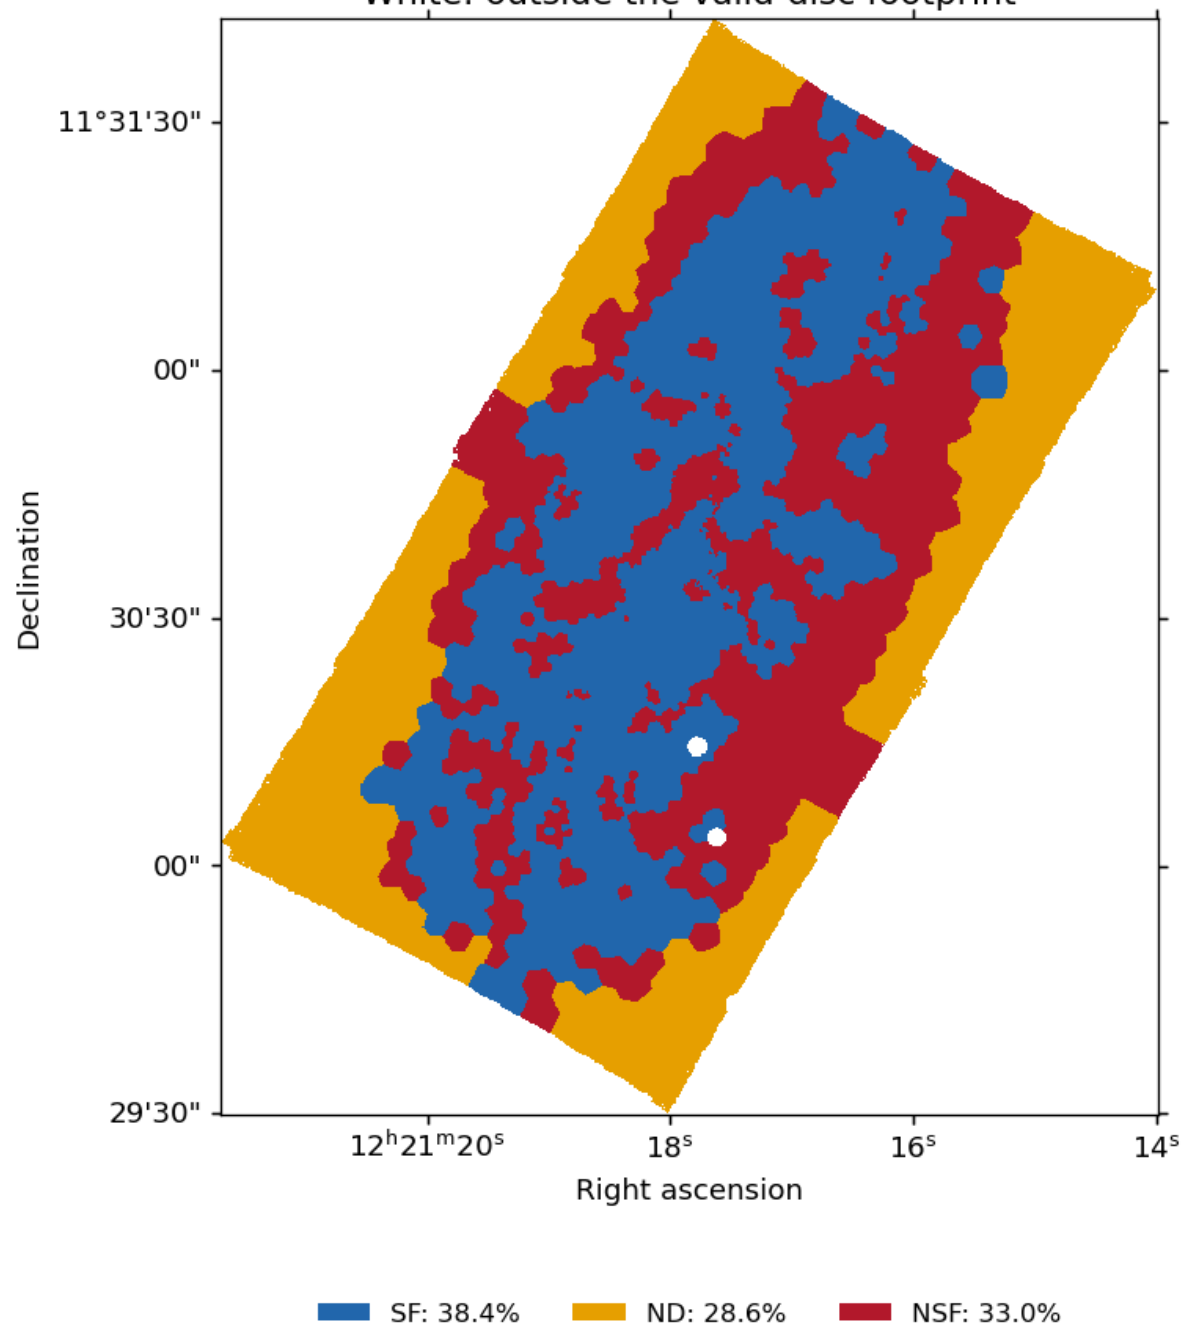

SF: 63.4% ND: 17.2% NSF: 19.3%

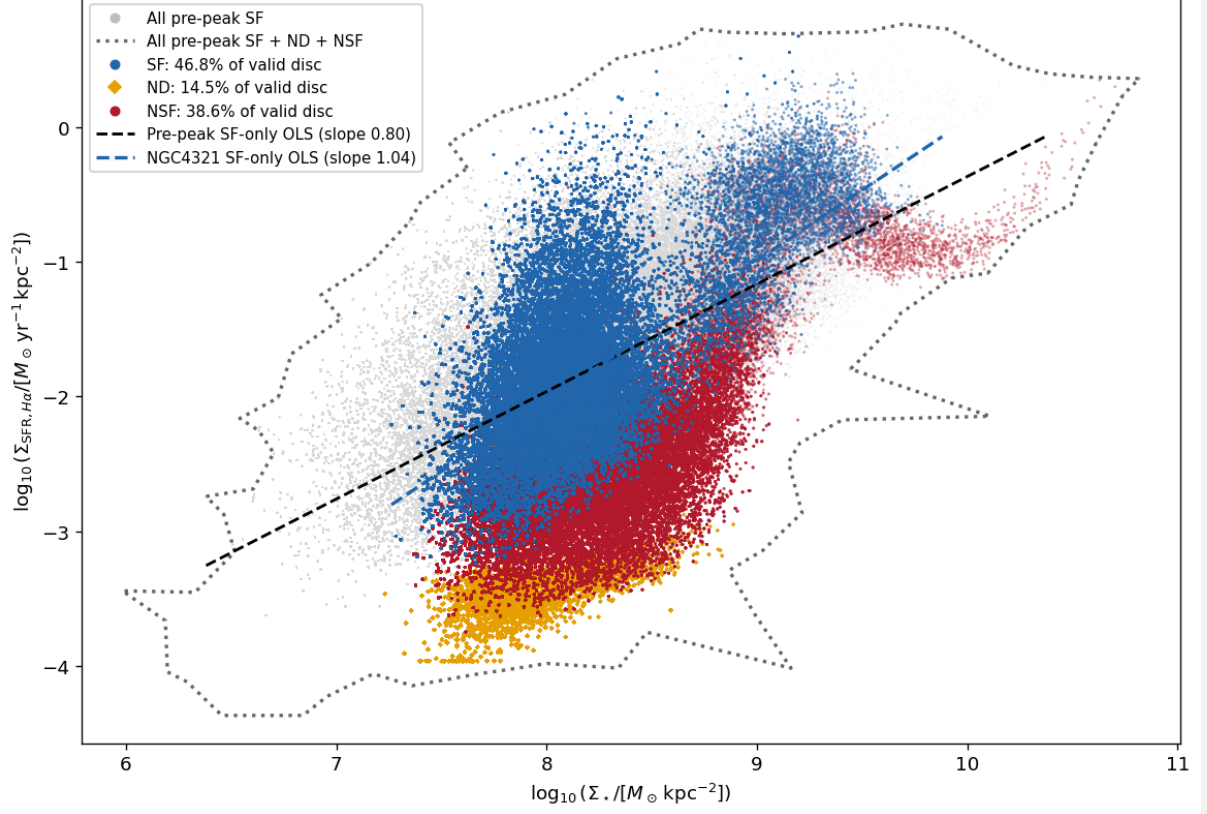

NGC4294 | pre-peak
Plotted SF / ND / NSF = 68,833 / 51,275 / 59,247

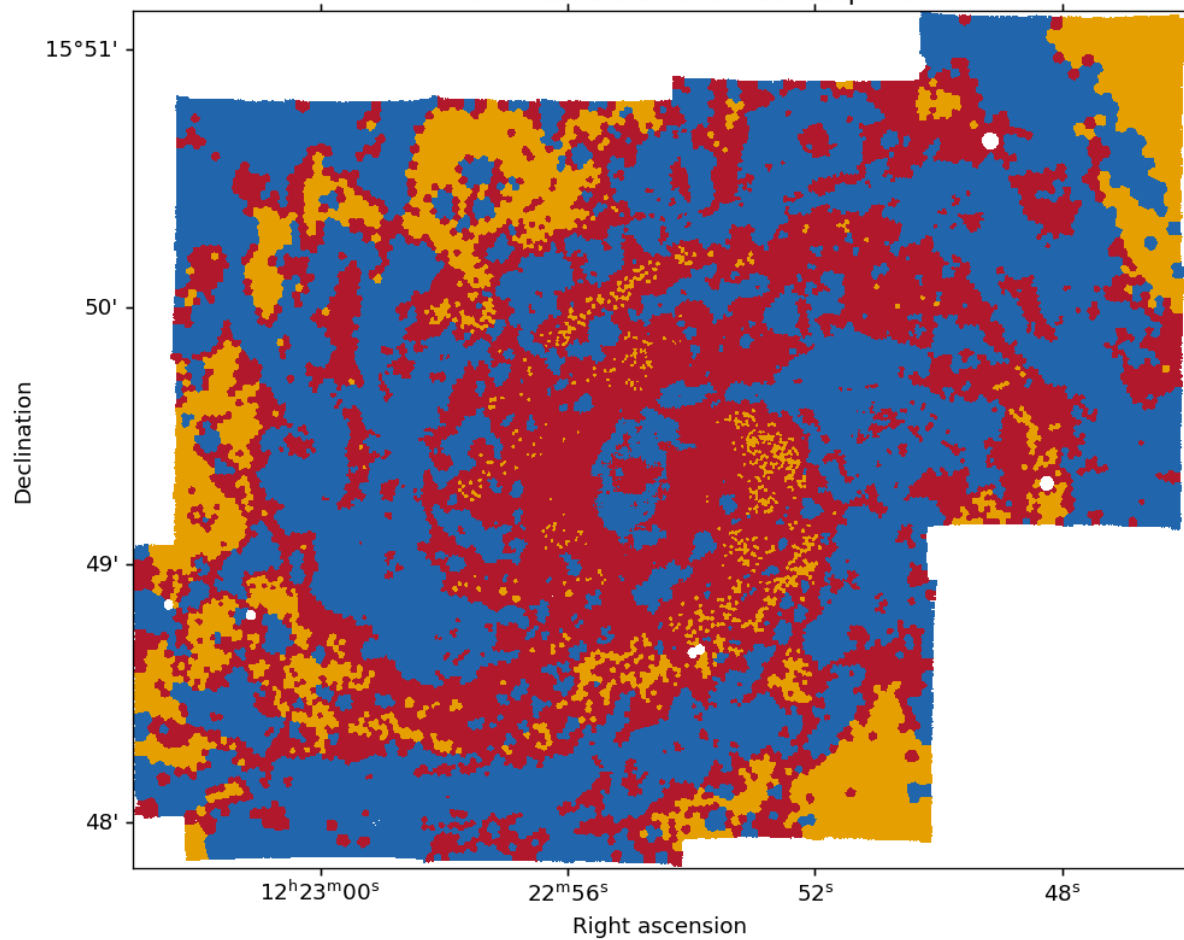

NGC4294 | pre-peak spatial categories
White: outside the valid-disc footprint

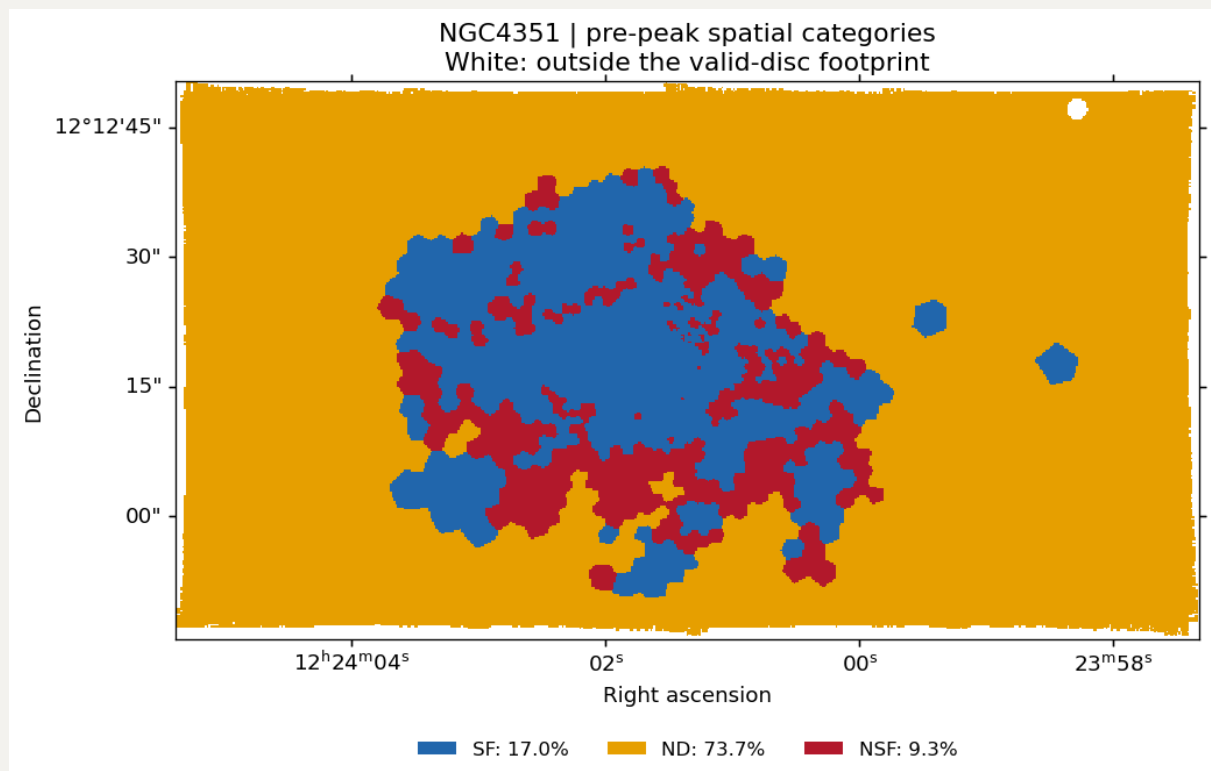

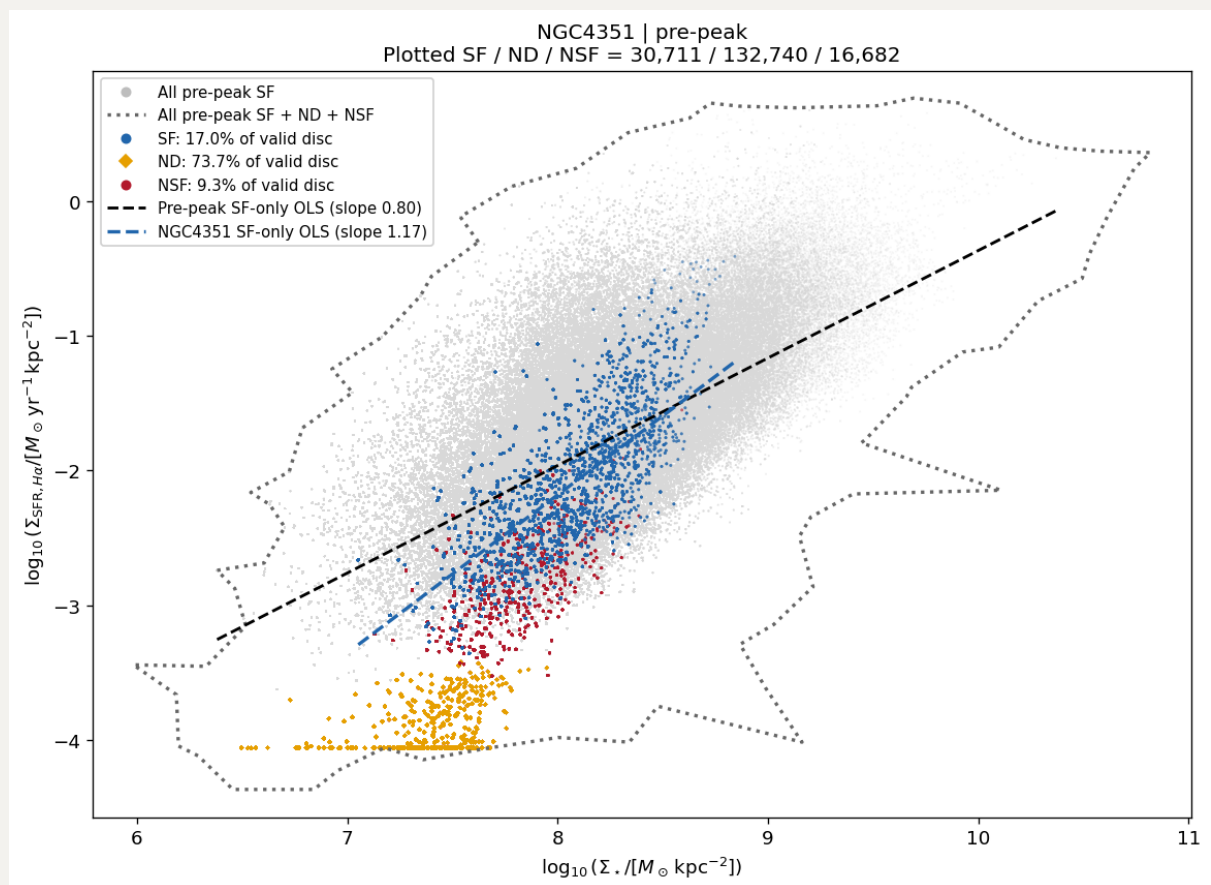

NGC4321 | pre-peak
Plotted SF / ND / NSF = 454,131 / 141,086 / 374,942

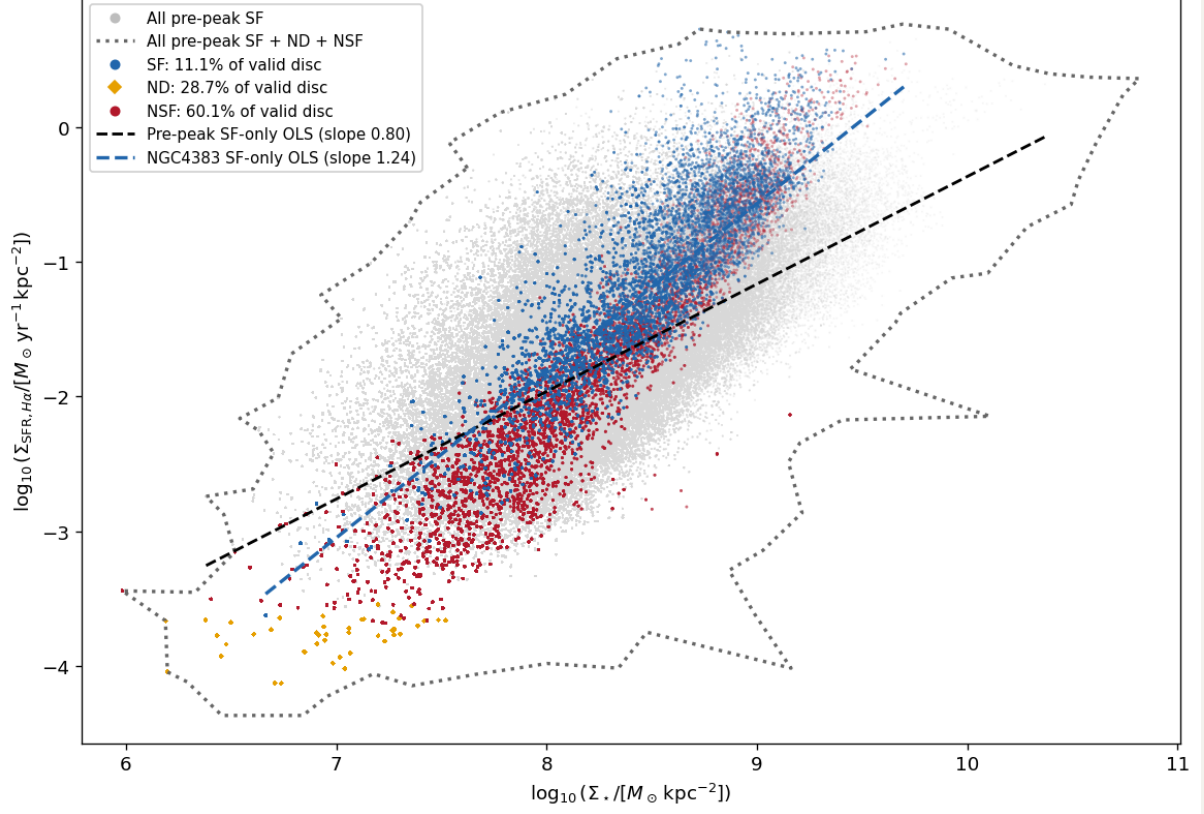

NGC4321 | pre-peak spatial categories
White: outside the valid-disc footprint

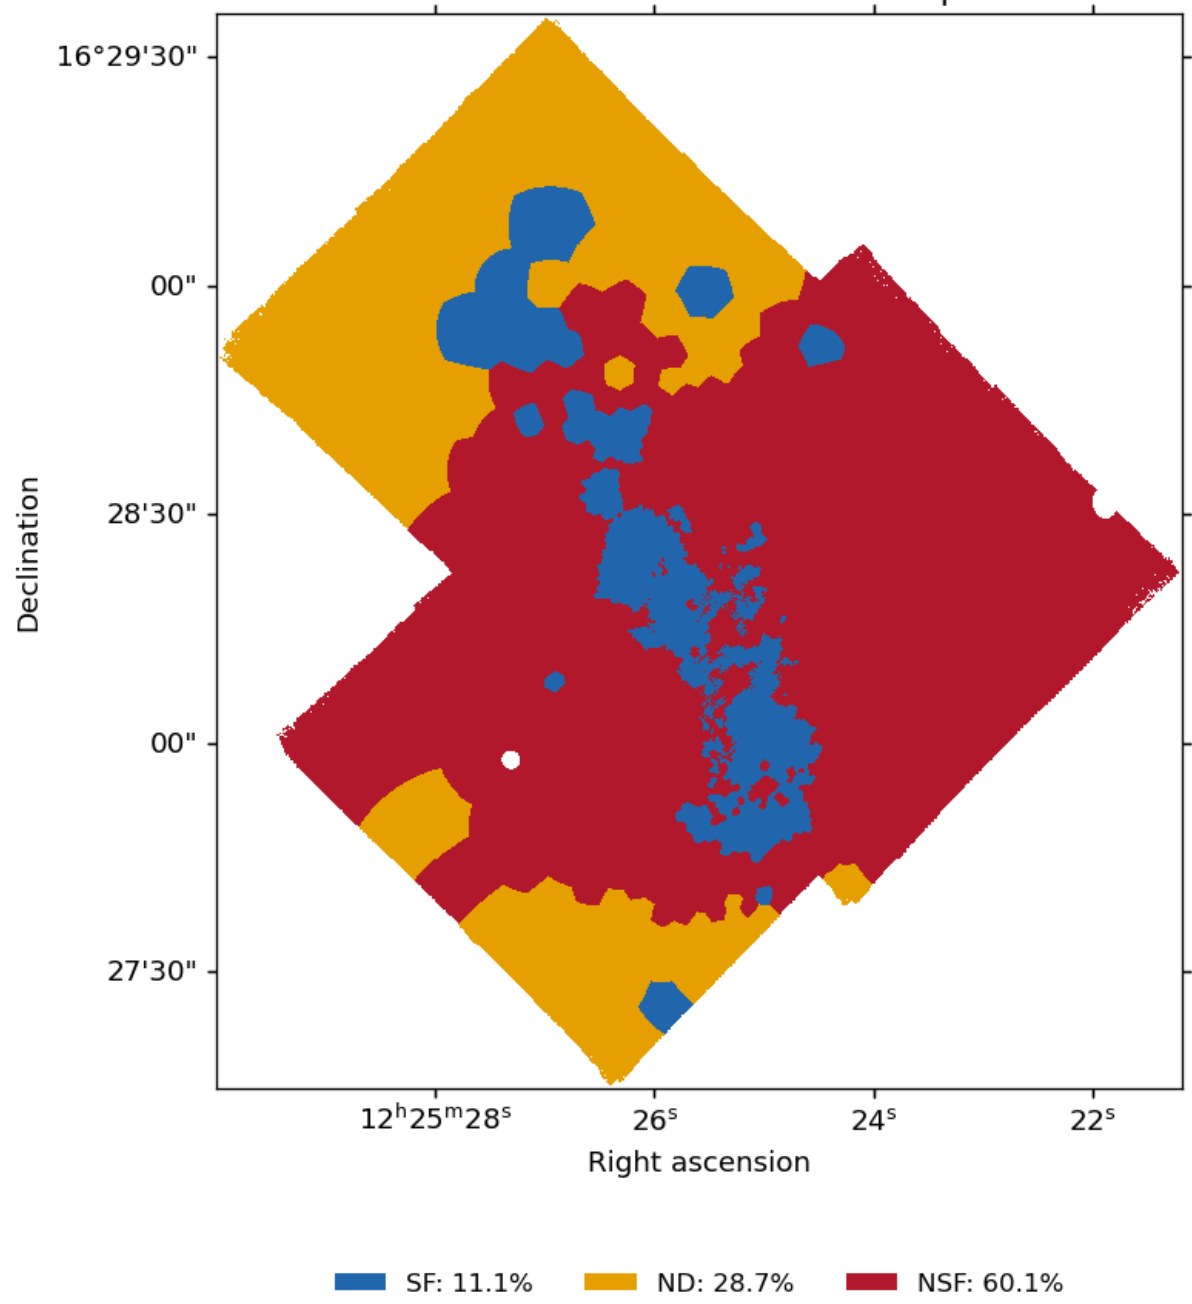

SF: 46.8% ND: 14.5% NSF: 38.6%

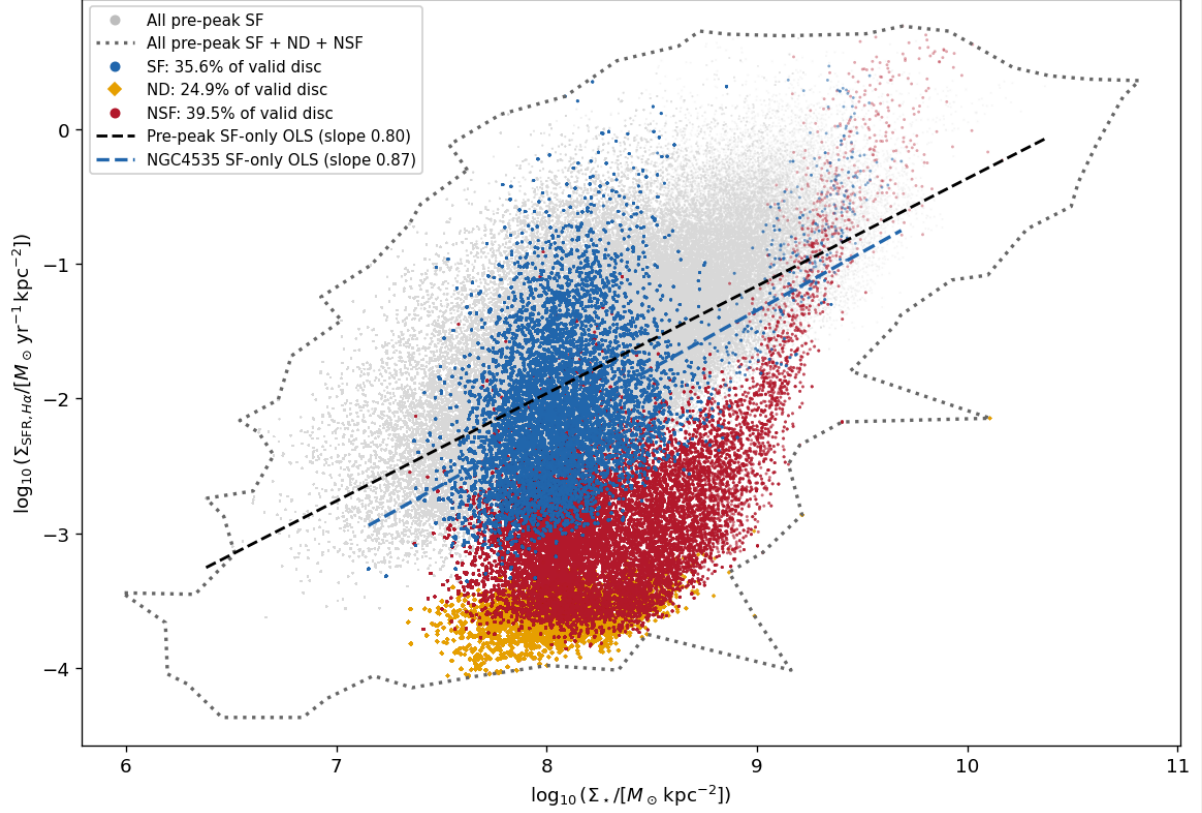

NGC4383 | pre-peak
Plotted SF / ND / NSF = 25,212 / 65,261 / 136,558

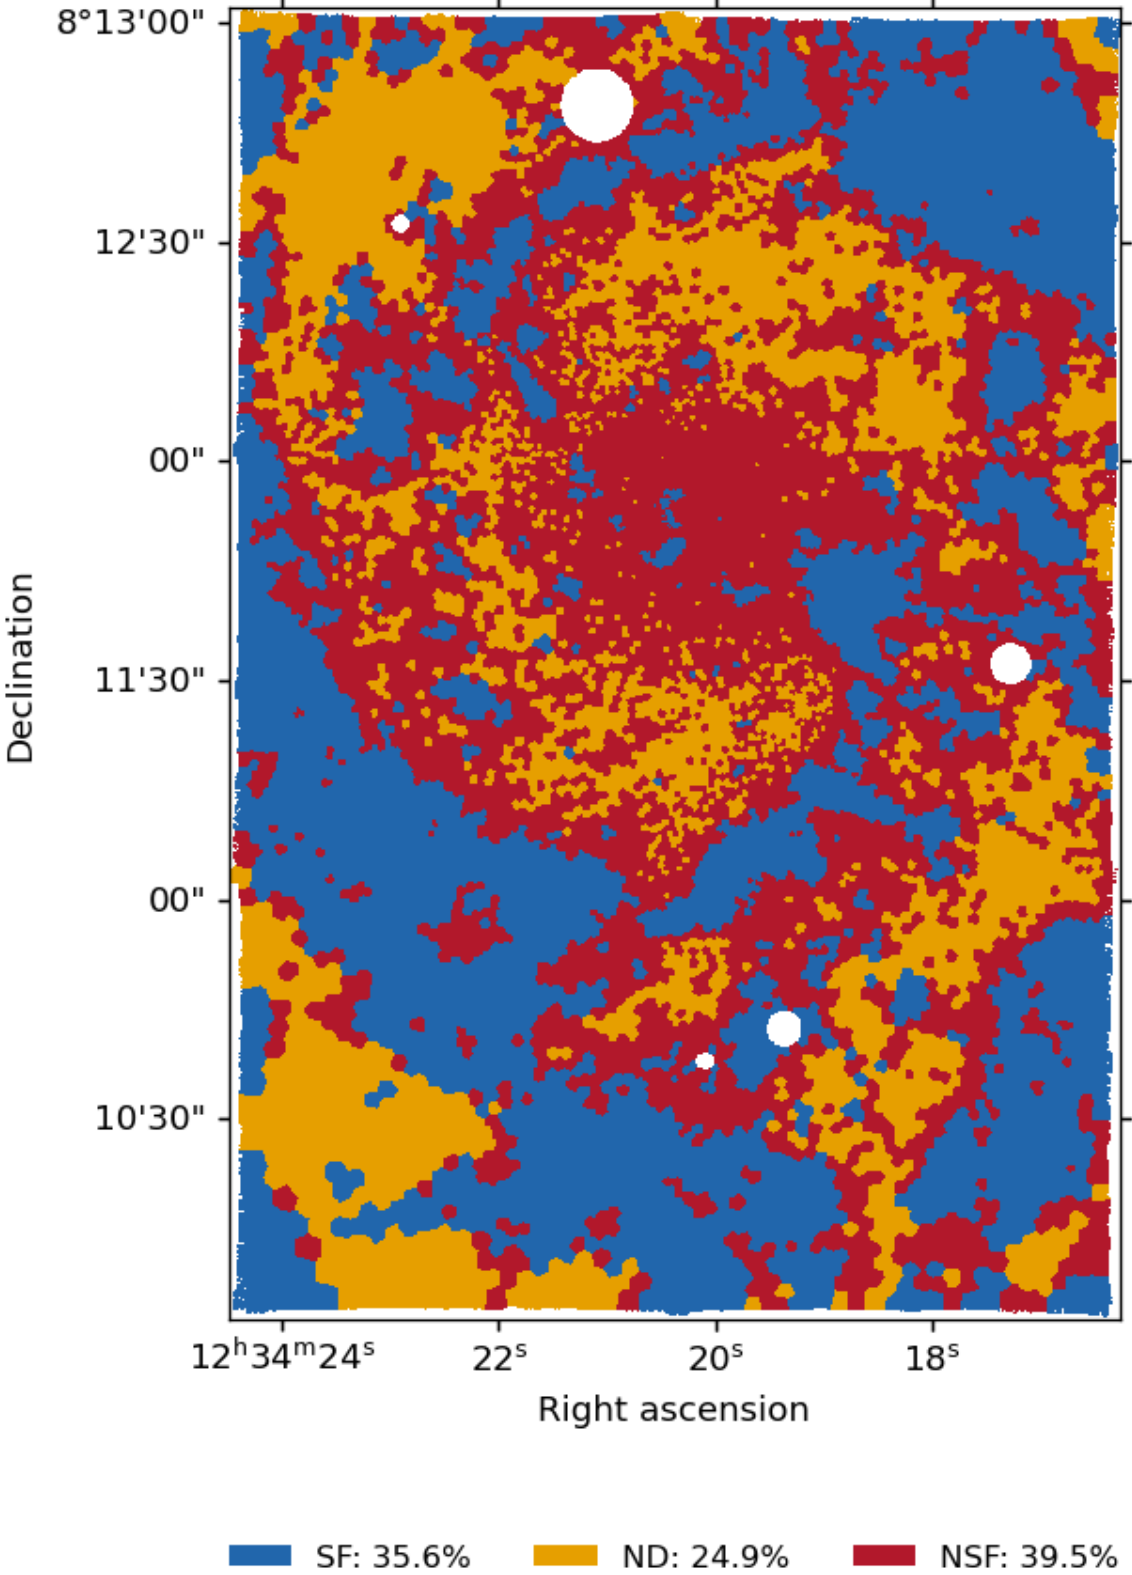

NGC4383 | pre-peak spatial categories
White: outside the valid-disc footprint

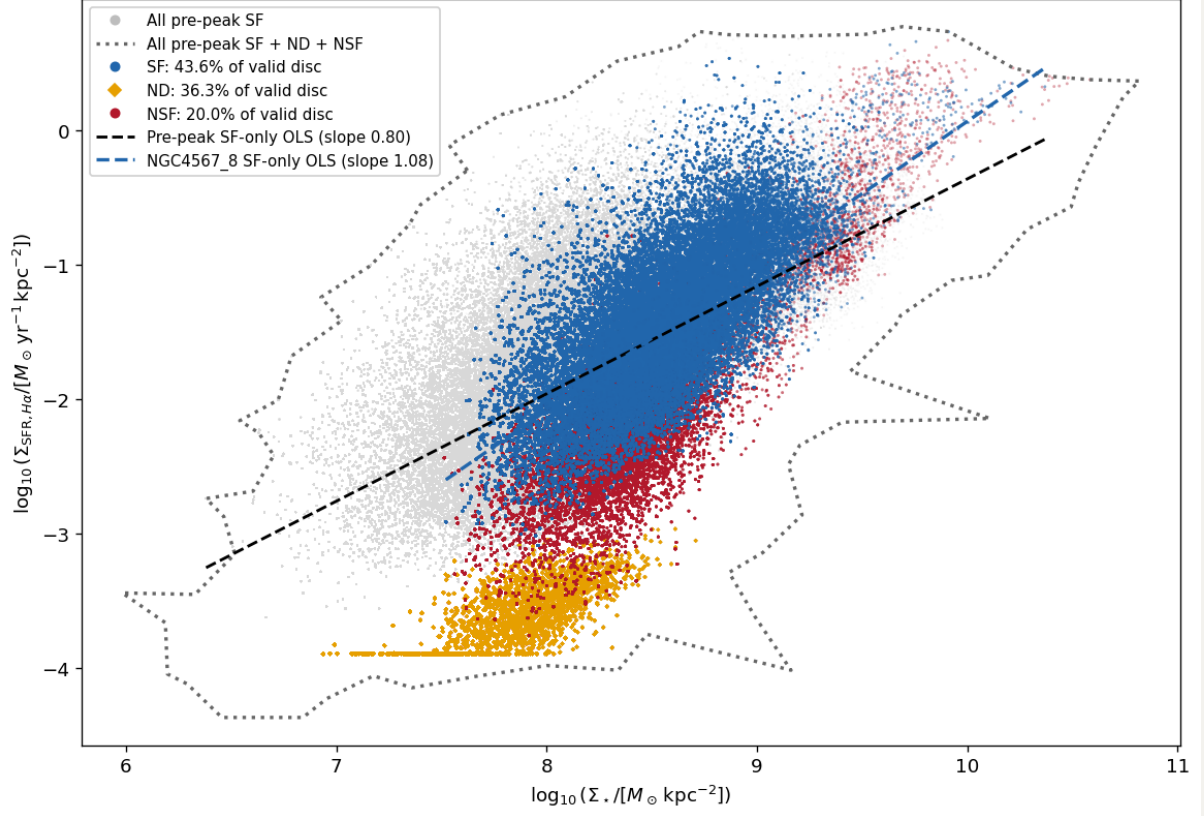

NGC4535 | pre-peak
Plotted SF / ND / NSF = 187,113 / 130,687 / 207,301

NGC4535 | pre-peak spatial categories
White: outside the valid-disc footprint

NGC4567_8 | pre-peak
Plotted SF / ND / NSF = 222,533 / 185,310 / 102,275

NGC4567_8 | pre-peak spatial categories
White: outside the valid-disc footprint
