

Here we compare AGE, METAL, V, SIGMA, HA6562_FLUX and HA6562_VEL.

Now we can see the similar median velocity offest in both stellar and gas by $\sim 2\text{km/s}$.

1	metallicity	dex	177500	0.000000	0.000000	0.000000
2	stellar velocity	km/s	177500	53.445818	49.728595	-2.091
3	stellar velocity dispersion	km/s	177500	47.875719	41.985591	-5.356
4	Halpha flux	flux	177500	22.148083	21.872223	-0.160
5	Halpha velocity	km/s	177500	32.710389	28.421357	-2.197

Then we also show the pairwise and residual
