

20260414 Integrated SFMS, MZR and FMR

Loaded published integrated properties for target galaxies:

```
IC3392: logM*=9.810 +/- 0.060 [Villanueva+2022]; logSFR=-1.300
+/- 0.200 [Leroy+2021]
NGC4064: logM*=10.010 +/- 0.090 [Villanueva+2022]; logSFR=-1.070
+/- 0.200 [Leroy+2021]
NGC4192: logM*=10.780 +/- 0.100 [Leroy+2021]; logSFR=0.130 +/-
0.200 [Leroy+2021]
NGC4293: logM*=10.510 +/- 0.070 [Villanueva+2022]; logSFR=-0.270
+/- 0.200 [Leroy+2021]
NGC4298: logM*=10.020 +/- 0.070 [Villanueva+2022]; logSFR=-0.260
+/- 0.200 [Leroy+2021]
NGC4330: logM*=9.600 [local mass log]; logSFR=-0.810 [local sfr
log]
NGC4383: logM*=9.580 +/- 0.070 [Villanueva+2022]; logSFR=0.010
+/- 0.200 [Leroy+2021]
NGC4396: logM*=9.360 +/- 0.100 [Leroy+2021]; logSFR=-0.670 +/-
0.200 [Leroy+2021]
NGC4419: logM*=10.230 +/- 0.080 [Villanueva+2022]; logSFR=-0.120
+/- 0.200 [Leroy+2021]
NGC4457: logM*=10.360 +/- 0.080 [Villanueva+2022]; logSFR=-0.490
+/- 0.200 [Leroy+2021]
NGC4501: logM*=10.990 +/- 0.080 [Villanueva+2022]; logSFR=0.430
+/- 0.200 [Leroy+2021]
NGC4522: logM*=9.660 +/- 0.100 [Leroy+2021]; logSFR=-0.780 +/-
0.200 [Leroy+2021]
NGC4694: logM*=9.920 +/- 0.070 [Villanueva+2022]; logSFR=-0.850
+/- 0.200 [Leroy+2021]
NGC4698: logM*=10.460 +/- 0.080 [Villanueva+2022]; logSFR=-0.830
+/- 0.200 [Leroy+2021]
```

Curti+2020 FMR residuals (O3N2-C20, total region) for the 14 galaxies

Galaxy	$\log M_{*}$	$\log \text{SFR}$	Z_{obs}	Z_{pred}	$\Delta(\text{obs}-\text{pred})$
IC3392	9.810	-1.300	8.739	8.771	-0.032
NGC4064	10.010	-1.070	8.742	8.774	-0.031
NGC4192	10.780	0.130	8.738	8.776	-0.037
NGC4293	10.510	-0.270	8.701	8.775	-0.073
NGC4298	10.020	-0.260	8.766	8.743	+0.023
NGC4330	9.600	-0.810	8.701	8.725	-0.024
NGC4383	9.580	0.010	8.587	8.608	-0.022
NGC4396	9.360	-0.670	8.599	8.653	-0.054
NGC4419	10.230	-0.120	8.724	8.757	-0.033
NGC4457	10.360	-0.490	8.724	8.774	-0.050
NGC4501	10.990	0.430	8.753	8.776	-0.023
NGC4522	9.660	-0.780	8.726	8.732	-0.006
NGC4694	9.920	-0.850	8.699	8.765	-0.065
NGC4698	10.460	-0.830	8.681	8.778	-0.096

$N = 14$
 $\text{Mean } \Delta Z = -0.037 \text{ dex}$
 $\text{Median } \Delta Z = -0.033 \text{ dex}$
 $\text{RMS } \Delta Z = 0.047 \text{ dex}$
 $\text{Std}(\Delta Z) = 0.030 \text{ dex}$

So the median deviation from the FMR surface for our 14 MAUVE-MUSE galaxies is -0.033 dex, which is similar to the value reported by Curti+2020, 0.028 dex.
