

20260818 GM Recalculation of Koppen 2018 on MAUVE

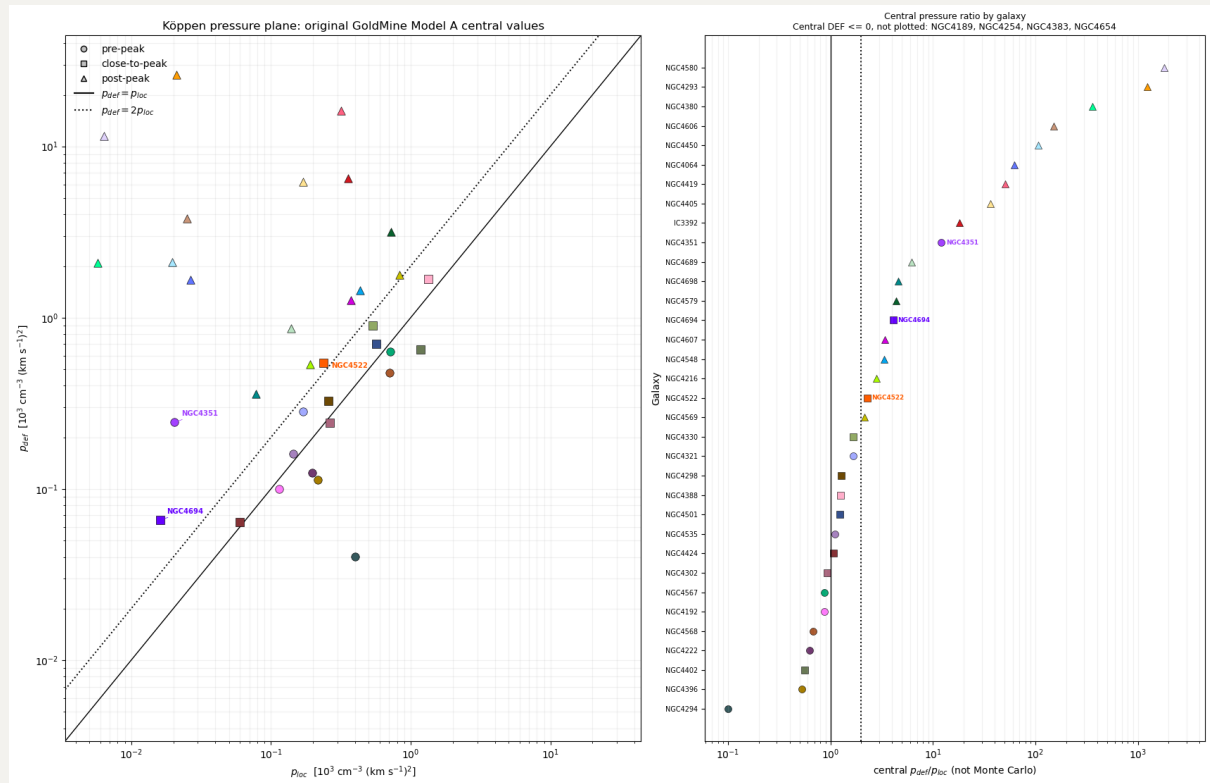

Post-peak galaxies are still post-peak by model

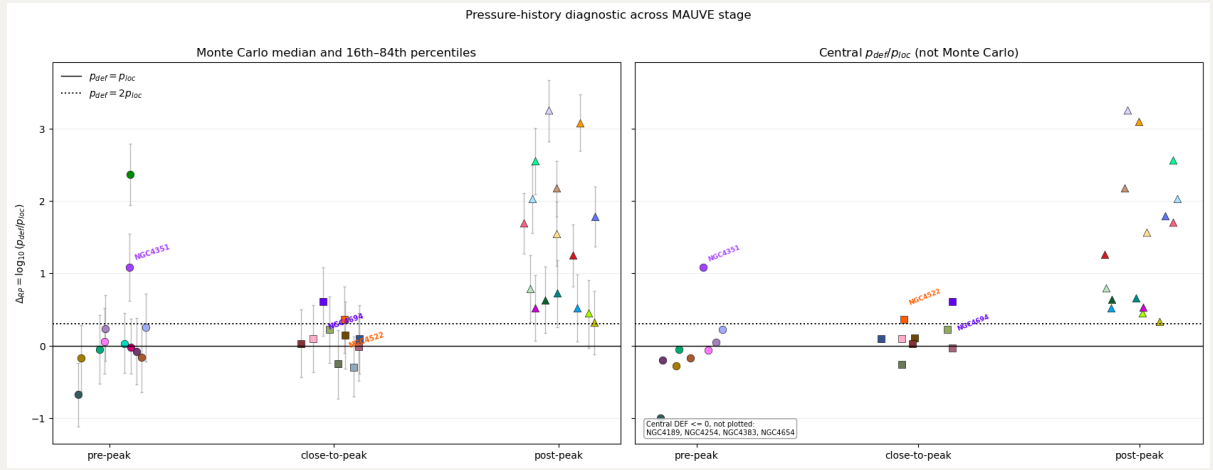

Original Koppen+2018 prescription:

B-band 25 magnitude diameter (D_{25}): GoldMine

Expected HI mass ($M_{\text{HI}}-D_{25}$ relation): Gavazzi+2013 (much shallower slope~1.38)

Expected HI diameter (r_{max}): $r_{\text{max}} = 1.5R_{25}$

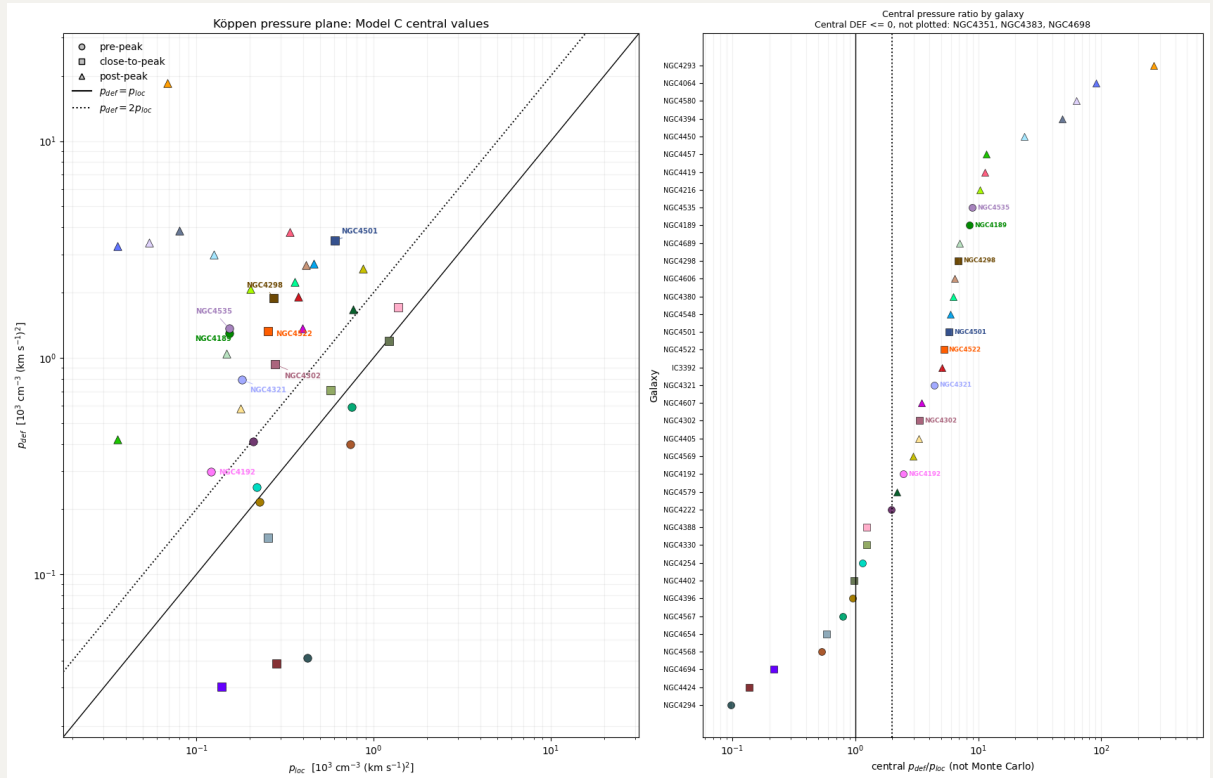

Updated Koppen+2018 prescription:

B-band 25 magnitude diameter (D_{25}): Hyperleda (same data source as Jones+2018)

Expected HI mass ($M_{\text{HI,expected}} - D_{25}$ relation): Jones+2018 (AMIGA survey, morphology-dependent, slope~1.78)

Expected HI diameter (HI size-mass relation): Wang+2016 (new AMIGA survey also find the same relation)

Pressure-history diagnostic across MAUVE stage
