

PhD Progress Review Form

This form summarises feedback from the PhD Panel Review Process at ICRAR/UWA. Details of student, supervisor, and panel responsibilities, set out by the GRS, can be found [here](#).

Part A: General Information

Student name	Rongjun Huang
Student ID	22402136
PhD start date	01/02/2025
Coordinating supervisor	Luca Cortese
Panel chair	Kenji Bekki
Milestone	6 month
Date of review	28/8/25

Part B: Panel Assessment

This section is to be completed by the panel chair after consulting the other panel members, the supervisors, and the student. Please tick the applicable statements below. Where relevant, provide details in the comment box at the end of each section.

1. Progress checks

- ☐ a. The panel confirms that the student's progress since the last review or program start has been adequate and commensurate with their timeline. (If not, comment.)
- ☐ b. The student's completion plan has been updated, and they are on track to complete within the candidature period. (If not, comment.)
- ☐ c. The milestones and goals are achievable and appropriate. (If not, comment.)
- ☐ d. The student has prepared their annual progress report for submission to HDRHub. (If not, comment.)
- ☐ e. The student has participated in training or development activities since the last review. (If yes, list activities in the comment box.)
- ☐ f. The student would benefit from interim progress reporting. (If yes, comment.)

Optional comments and recommendations by the panel:

The panels think that there is no risk in Rongjun's project. The multi-wavelength data sets (e.g., from MAUVE-MUSE) are ready for their analysis in his project, and he also has obtained some new results on the "local" scaling relations of galaxies (e.g., metallicity vs star formation rates) in the Virgo cluster of galaxies. His talk was clear and informative, and he could nicely explain the 1st component of the project. The supervisors and Rongjun have a weekly meeting to discuss his progress, and the panels think that their relationships are quite good, contributing to his productive research so far. He has just started the research in this area (environmental effects on galaxies), so he might need to understand the big picture of this area. It is a bit unclear how his three projects are mutually related with each other, in particular the first and second components.

2. Presentation skills (for 1-year and 3-year reviews)

- ☐ a. The student demonstrates adequate presentation skills. (If not, comment.)
- ☐ b. The presentation accurately reflects the student's progress. (If not, comment.)
- ☐ c. The student answered the questions adequately and with sufficient clarity. (If not, comment.)

Optional comments and recommendations by the panel:

He appears to have enough skills to analyze both optical and radio data for this projects judging from this presentation (this information is important to assess the feasibility of this project for him). A bit more background information on this area of research could have been presented in his talk (e.g., theoretical predictions of local scaling relations etc).

3. Student support

These are additional topics for the panel to consider and discuss where appropriate.

- a. Is the student satisfied with their progress and are they motivated to complete the project?
- b. Does the student feel supported by their supervisors?
- c. Concerns about student well-being (e.g. stress, work-life balance) or interpersonal issues (e.g. with other students or staff) should be brought to the attention of GRCs.

- d. Consider options for developmental assistance in oral/written communication or other skills essential to the project.
- e. (2nd year and above) Encourage students and supervisors to discuss career prospects and opportunities.
- f. (2nd year and above) Encourage students to advertise their work at conferences, workshops, seminars, etc.

Optional comments and recommendations by the panel:

Given the already new results of local scaling relations in his talk (i.e., already demonstrated progress for the 1st project), we do not see any problem in his 6month research activities.

Part C: Supervisor Comments (Optional)

Rongjun's performance during the first five months of his PhD has been very good. He has made significant progress on project 1, both technically and in developing a solid understanding of the project's background. His enthusiasm for the topic is evident, and his interactions with the supervisory team have been consistently positive and productive. At this stage, while the project certainly presents its challenges, we have no concerns regarding Rongjun's performance. Our only recommendation is that he actively takes advantage of every opportunity within ICRAR to present preliminary results. These experiences will help him further develop his presentation skills and gain confidence in responding to questions in real time. Aside from this, our advice is simply to continue the good work he is doing.

Part D: Signatures

	Name	Date	Initial to confirm
Panel chair	Kenji Bekki	9/9/25	K.B.
Coord. supervisor	Luca Cortese	12/9/25	L. C.

Copies of the completed and initialled forms should be sent to the student, their supervisors, the student's GRC, PhD Panel Coordinator, and ICRAR Administration.

Students are encouraged to attach this form as "supporting documentation" when completing their milestone on HDRHub.
